

this lab section, I have possessed the data of two columns of current fleets and new fleets. I used the fundamental code supplied by the module source, then change the code in order to deal with different data. Finally, I obtained the two standard deviations of current fleets and new fleets, which are 4.17 and 6.07 respectively. And through bootstrap, I obtained the lower and upper standard deviation of current fleets are 3.39 and 4.84, and that of new fleets are 5.14 and 6.90. So the two standard deviation are comparable.
